

UK ROAD TANKER INSPECTION LTD.

**PART OF THE
BRITISH ENGINEERING
SERVICES GROUP**

At UK Road Tanker Inspection (UK RTI) we've been working with J E Lawrence, fuel distribution company, for more than five years. For the specialist domestic, commercial heating and agricultural oil and road fuel supplier staying safe and legally compliant, while minimising tanker down time is an absolute must.

Maintaining thorough and regular tanker inspections is vital for the safe and smooth running of any business relying on industrial vehicles of this nature. J E Lawrence take their responsibilities seriously and, after meeting our team at a trade show several years ago, partnered with UK RTI for their inspection services.

With a team spread across many parts of the UK, we provide mobile testing and travel to the J E Lawrence site to complete their inspections. Our specialist engineers are thorough and efficient, working with the local team to get the job done effectively. We use gas testing methods, as the most efficient and environmentally friendly approach, which is also the preferred method of the on-site team. Once our work is complete, our people share a preliminary report while still with the customer, followed by an electronic copy of the complete and final report just a few days later.

"We've worked with the UK RTI team for five years now and they do a great job. They're flexible, suggest areas of improvement and just get the job done. We're out in the countryside and not always easy to get to, but the engineers never let us down," said Richard Boyes.
